T PROFILE
FOR MODULAR CEILINGS
FRECCIA.
TECHNICAL SPECIFICATION

|	
Structure material:	Galvanized steel DX51D+Z100 MAC
Coating material:	Pre-painted steel DX51D+Z100 MAC
Hook material:	Stainless steel
Connection between profiles:	Bearing profile: arrow pressed hook Secondary: clip hook
Colour of coating:	Pre-painted White DONN-WHITE Silver / Black Mirror aluminium
Weight of structure:	ca. 1 Kg/m²
Medium load capacity:	52,3 N
Fire reaction:	Class A1
Organic coating:	25µm polyester paint
Breaking load:	281 N/mm²
Durability:	Class B
Flexion class:	1 (ONE)
Packaging:	Cardboard box with plastic strapping

GENERAL DESCRIPTION

T-profile with 'Freccia' type hook, suitable for indoor use in buildings. It is particularly suitable for the construction of modular ceilings with standard dimensions 600x600 / 600x1200 / 300x1200. It consists of a 38mm high structure and a pre-painted (white or coloured) coating with an exposed dimension of 15mm. The elements that make up the system are: the PP3700 main runner, the IL1200 long cross-tee and the IC600 short cross-tee. The profile has a Freccia hook, which is made of stainless steel, and its shape guarantees quick and easy assembly. The eyelet, with high tensile strength, facilitates insertion or removal of the transverse profile by simple finger pressure.

ASSEMBLY STEPS

-After defining the height of the false ceiling, mark it on the walls with a laser or a coloured line

-Install the perimeter profile with appropriate dowels with an average pitch of 600 mm

-After having identified the fixing area of the suspensions, create a mesh with a 1200 mm spacing (special cases are excluded from this indication)

-Firmly anchor the pendants and insert the PP3700 inside them, place it horizontally and make sure it is positioned on the perimeter profile.

-Install the bearing profiles with a pitch of 1200 mm, proceed with the assembly of the other profiles (IL, IC) and create the desired module.

-Insert the panels for the final closure of the false ceiling.

N.B. In the case of an anti-seismic system, please refer to the the technical data sheet of the G-SEISMIC Kit or the leaflet that is included in each package.

DESCRIPTION AND MODULE CONFIGURATION

The visible substructure is formed by a "T" section profile, composed of a PB3700 bearing profile, a IL200 long middle profile and a IC600 middle profile. The PP3700 is suspended from the floor at a pitch of 1200mm by means of accessories, which have an assembly distance of 1200mm, while for the realisation of the grid it is sufficient to assemble the snap-on profile.

APPLICATIONS, ACCESSORIES AND SUSPENSIONS

Accessory G-SEISMIC

In constructions where an anti-seismic performance is required, the system can be integrated with an anti-seismic kit type G-SEISMIC, applied on the bearing profile and on the perimeters.

Description

The T-structure has the possibility of several types of suspensions, each of which has its own characteristics that make the suspension of the structure suitable, effective and safe for any type of ceiling. The assembly of the suspensions is simple and intuitive and guarantees practicality when setting up the structure.

Profile PPC

Profile T "FRECCIA"
T-profile installation with PPC
In addition to its function as a perimeter profile, the **PPC** profile has the characteristic of making a cut metal panel coplanar by using a C profile inside it, in order to favour its rigidity and blocking. The colour of the PPC profile can vary according to the T structure or the chosen panels that will be mounted on the false ceiling..

Profile PDL

Profile T "FRECCIA"

Joint

T-profile installation with PDL

In addition to its function as a perimeter profile, the **PDL** profile has the characteristic of making shutters due to its stepped shape and thanks to this it is possible to place the T-profile on the upper or lower part of it. The colour of the PDL profile can differ depending on the T-profile or the chosen panels that will be mounted on the false ceiling.

Profile PPF

Profile T "FRECCIA"
T-profile installation with PPF
The **PPF** profile may vary depending on T-sructure or chosen panels, but it also has the capacity to be used as a connection profile for height differences (e.g. soffits), in order to avoid additional grouting processes. It is possible to insert 13 to 15 mm plasterboard panels. The colour of the PPF profile may vary depending on the T-structure or the chosen panels that will be mounted on the false ceiling.

Profile PPL

Profile T "FRECCIA"
T-profile installation with PPL

The **PPL** is a classic L perimeter profile suitable for panel application (see some possible applications on page 49). (See some possible applications on page 49.) The colour of the PPL profile can differ depending on the T-structure or the chosen panels that will be mounted on the ceiling.

N.B. The following representations are indicative and are suitable for application with the profiles indicated on pages 5 and 6 in order to view each single system, we recommend downloading the "integrated ceilings" catalogue from the **vertebra.com** website.

NORMATIVE REFERENCES

-Construction product according to Regulation (EU) 305/2011
-CE marking in accordance with EN 13964
-Sheet metal quality and coating grade in accordance with EN 10143 and EN 10346

CE MARKING

The products listed in this catalogue are intended for use inside buildings. Each product has a Declaration of Performance (DoP). Reaction to fire: class A1/Durability: class B (building components exposed to relative humidity varying up to 90% and temperatures varying up to 30°C but without corrosive pollutants, except for products in class C5-M).

PRODUCT STORAGE

The packages should be stored under cover in a relatively dry atmosphere and at a temperature as constant as possible, in order to avoid condensation which could reduce the passivation protection of the galvanised surface. In the case of outdoor storage (not recommended), use a cover that provides perfect protection of the material against the weather (rain, fog, snow), taking care to place the packages at a slight angle. This cover must in any case be such as to allow adequate ventilation (not bringing the two surfaces into direct contact) so that humidity does not accumulate and create condensation.
